

USING A PROPOSITIONAL DIFFUSION MODEL
TO EXAMINE THE IMPACT OF BROADBAND CONNECTIVITY
UPON ENVIRONMENTAL MONITORING

A Thesis
Presented to the
Faculty of
San Diego State University

In Partial Fulfillment
of the Requirements for the Degree
Master of Arts
in
Communication

by
Kimberly Mann Bruch
Summer 2002

THE UNDERSIGNED FACULTY COMMITTEE APPROVES
THE THESIS OF KIMBERLY MANN BRUCH:

Peter Andersen, Chair
School of Communication

Date

Brian Spitzberg
School of Communication

Eric Riggs
Department of Geological Sciences

SAN DIEGO STATE UNIVERSITY

Summer 2002

ACKNOWLEDGMENTS

First of all, I thank the High Performance Wireless Research and Education Network (HPWREN), which is funded by the National Science Foundation, for providing me with the inspiration and partial funding to conduct this thesis study. Specifically, I would like to thank HPWREN Principal Investigator Hans-Werner Braun for his neverending insight and support throughout this project.

Of course, no thesis project is possible without the guidance of thesis committee members. Words cannot express my gratitude to Professor Peter Andersen, Professor Brian Spitzberg, and Professor Eric Riggs. As my chair, Professor Andersen provided me with the direction necessary to complete my study; Professor Spitzberg spent much time helping me with my methodologies and results; and Professor Riggs answered my multiple questions regarding ecological field science. Without each of these committee members, my project would not have been possible.

I also thank the SDSU Field Stations Program (FSP) for allowing me to examine the impact of HPWREN upon their ecological field researchers. Particularly, I am grateful for FSP Executive Director Sedra Shapiro and the advice that she provided me during my study. Ms. Shapiro and the FSP staff played an integral role in assisting me with completing this project and I am most appreciative for their help.

Last, but not least, I thank my beloved husband Mike Bruch for enduring my endless quest for knowledge and encouraging me to pursue my dreams of advanced education. Mike, you are not only the greatest husband in the universe, but also the best friend anyone could ever have. Thank you!

TABLE OF CONTENTS

	PAGE
ACKNOWLEDGMENTS	iii
LIST OF FIGURES	vii
CHAPTER	
I. INTRODUCTION AND LITERATURE REVIEW	1
Critical and Analytical Research	3
Development of a Propositional Diffusion Model Based Upon Related Literature	5
Propositional Diffusion Model: Social System Sub-Model	5
Characteristics of Members	5
Socioeconomic Status and Interpersonal Competence	6
Innovativeness	7
Communication Channels	8
Systemic Nature	11
Networks	11
Norms	11
Opinion Leadership	11
Propositional Diffusion Model: Innovation Development Sub-Model	13
Nature of Innovation: Preventive or Incremental	13
Perceived Attributes	14
Equilibrium Period	16
Propositional Diffusion Model: Innovation Implementation and Use Sub-Model	17
Diffusion Communication	17
Continued Perceptions	20
Adoption Decision	20

CHAPTER	PAGE
Propositional Diffusion Model: Direct Consequences Sub-Model	21
Propositional Diffusion Model: Summary	24
Concluding Remarks and Analytical Research Overview	24
II. METHODS	29
Participants	29
Setting	29
Procedures	32
Variables	34
Perceived Attributes and Continued Perceptions	34
Relative Advantage	35
Compatibility	35
Complexity	35
Diffusion Communication	36
Adoption Decision	37
Statistical Analysis	37
III. RESULTS	39
Bivariate Correlations	39
Multiple Regression	40
IV. DISCUSSION	43
Hypotheses One and Two	43
Hypothesis Three	44
Hypothesis Four	45
Hypotheses Five and Six	45
Hypotheses Seven and Eight	46
Hypothesis Nine	47
Summary	48
